Simultaneous confidence bands for regression analysis

Liu, Wei

University of Southampton, United Kingdom W.Liu@maths.soton.ac.uk

This talk will provide an overview of the methodology of simultaneous confidence bands for parametric regression analysis. We will look at how simultaneous confidence bands can be used in regression analysis to make sensible and informative inference, the key in the construction of simultaneous confidence bands, the two optimality criteria for comparison of simultaneous confidence bands, and some unsolved problems. The talk should be accessible to anyone who has done linear regression models.
